## HOW IT WORKS?

FemiWave™ is a revolutionary procedure that uses low-intensity sound waves (also referred to as acoustic wave therapy) to increase sensation and natural lubrication as well as strengthen, tighten and improve physical appearance. The procedure increases cell signalling in blood vessels, which increases blood flow to nerves and the vaginal lining.

In addition, the FemiWave procedure activates the growth of healthier vaginal tissue. This process, called neurogenesis, enhances sensitivity in the vagina and can make orgasms easier to achieve. FemiWave restores the ability to lubricate and can reduce pain experienced during intercourse. *Both you and your partner will enjoy the results!*
